

Syrah achieves accreditation for ISO:9001 Quality Management Systems at Vidalia

The ISO:9001 Quality Management System (QMS) is the most widely used and implemented quality management system in the world. ISO:9001 principles range across customer focus, leadership, engagement of people, process approach, improvement, evidence-based decision making and relationship management.

Despite the challenges posed by the COVID-19 pandemic, Syrah successfully completed the ISO:9001 QMS stage 1 and stage 2 audits for its Vidalia Active Anode Material (AAM) Facility in Louisiana, USA in Q2 2021.

Zero non-conformities were identified in the audit process, and final certification was provided to the Vidalia team in June 2021.

Syrah developed and implemented its Quality Management System in order to improve the overall performance of operations and associated management systems, maintain a high-level of quality and strong customer service while providing a strong foundation for sustainable growth. By achieving this accreditation, the Company continues to demonstrate its commitment to providing a high quality and consistent product and services to our customers.

Well done to the Vidalia team!
